- Daily interaction with colleagues from sales, drawing, production and innovation departments
- Communicating with customers about project specific details
- Addressing challenges that might arise during the project
- Generating project specific documentation like drawings and protocols
- “Oversee” hardware and software configuration and testing for each system
- Organizing the factory acceptance test (FAT) together with the classification society and the customer
- “Oversee” Commissioning of the systems remote or on site.
- After sales and customer support
- Supporting the development of the Electrical propulsion system in all aspects

### Requirements

- Technical bachelor’s degree, preferably in automation and electrical engineering
- Someone with several years of relevant work experience with DC microgrids and/or Electrical/Hybride propulsion systems.
- Experience in project management of multidiscipline engineering teams on a diverse range of scopes is a must
- Experience in developing and maintaining good relationships with clients
- Interested in working with Electrical propulsion and Automation systems
- Customer oriented attitude
- Good communications skills
- Ability to travel abroad
- A good analytical skills
- Team player and a positive attitude

### We offer

- A job in a dynamic and very international environment
- An informal, collegial atmosphere
- A team of enthusiastic colleagues

- A competitive salary and a good secondary employment package
